

Product Specification

Product name	Lolina® Neural Precursor Cell Differentiation Supplement
Cat.No.	NaC206201
Size	5ml
Storage and shipping	Store NPCDS at -20°C; once added to medium, store at 4°C and protect from light. Do not refreeze after thawing. Dry ice.

Product Description

Lolina® Neural Precursor Cell Differentiation Supplement (NPCDS) is a sterile, concentrated (100X) solution which contains growth factors, hormones, and proteins necessary for the culture of normal neural precursor cells. The supplement is formulated (quantitatively and qualitatively) to provide an optimally balanced environment that selectively supports the growth of normal neural precursor cells in vitro.

Instructions for Use

For best results, use NPCDS in conjunction with 500 ml Neural Precursor Cell Differentiation Medium-b (NPCDM-b) and 5 ml fetal bovine serum (FBS).

Thaw NPCDS at 37°C. Gently tilt the tube several times to ensure complete mixing. Spray the medium bottle and supplement tube with 70% ethanol and wipe to remove excess liquid. In a sterile field, remove the caps without touching the interior threads with fingers. Add NPCDS to the basal medium and mix well. Since several components are light-labile, the medium should not be exposed to light for extended periods. We do not recommend warming medium in a 37°C water bath prior to use. When stored in the dark at 4°C, the reconstituted medium is stable for one month.

Caution: If handled improperly, some components of the medium may present a health hazard. Take appropriate precautions when handling it, including the wearing of protective clothing and eyewear. Dispose of properly.

Note

NPCDS is for research use only. It is not approved for human or animal use, or for application in in vitro diagnostic procedures.
